To whom it may concern,

RECOMMENDATION LETTER

It is my pleasure to write a recommendation letter about R-sensors' instruments and team.

Our company **Teknik Destek Grubu**, based in Ankara, Turkey, is a leader in structural health monitoring systems. We have been using seismic instruments manufactured by **R-sensors** for over 5 years.

We are using and installing different types of R-sensors' products, namely accelerometers MTSS-1031A, MTSS-1033A.

The instruments are now in operation and proved to be well-suited for structural health monitoring. The performance of the instruments conforms our requirements and R-sensors' team provides proper consulting and maintenance support to our satisfaction.

I am closely familiar with R-sensors' team due to several common projects of seismic structural monitoring.

Mr. Vadim Agafonov, General Director of R-sensors and head of science, is a reliable and result-oriented person. He has a higher technical education, PhD in Physics and Math, and a 23-year research experience record in molecular electronics and development of liquid-based seismic instruments. He has a team of professionals to develop and manufacture high-profile seismic instruments and ensure the company's growth.

We are planning to use R-sensors' seismic instruments in the upcoming projects of structural health monitoring as we did before.

Eren AYDIN

Technical Manager
